

# Blue Acoustic

## J1510 System

The **J1510** System is a super compact four cabinet, two module rig designed to cover small and medium sized audiences and gatherings with the highest quality sound reproduction.

Tremendous punch down below from the superb neo' magnet 15" drive unit sets the standard for the entire system.

Add in the neo' magnet, high efficiency 10" and the incredibly efficient 1" driver, also with a 1" neo' magnet fitted to a choice of 60° x 40° or 90° x 40 HF horns, and you have a wide-bandwidth *live* or *DJ* rig capable of stunning performance.

It's this versatility that sets Blue Acoustic apart from less capable rigs as we have proved in the past on numerous occasions.

### up top;

A 1" exit HF driver using a 52mm voice coil - efficiency 110dB 1w/1m

### in the midrange;

1 x 10" bass/mid using a 76mm voice coil - efficiency 97dB 1w/1m

### down below;

Single 15" using a 102mm voice coil - efficiency 98dB 1w/1m (half space)

### the module

Powersoft 3 channel module offering 1400w (LF) / 500w (MF) / 60w (HF).

So many small systems are essentially "pretty little boxes" built by manufacturers large and small who appear to have minimal user and design inexperience.

In contrast, we take the greatest care loading our systems with products built in Europe whilst our multi-layer birch plywood cabinets are built entirely in Shropshire.

The difference with the **Blue Acoustic J1510** rig is the level of expertise involved gained from many years within this industry.

In addition the intelligent merger of superb design, excellent build quality and the use of superior, well matched components creates a high value, very reliable product.
